PATENT APPLICATION

> A novel voice amplifier is disclosed that amplifies volume of a human voice from a microphone through a mobile device by utilizing a speaker that is communicably connected to the mobile device. In some embodiments, the voice amplifier is implemented as a mobile application (hereinafter “mobile app”, “voice amplifier mobile app”, or “SD2 Voice Amplifier mobile app”) that runs on a smart phone to purely amplify a voice of a user from a wired or wireless microphone.

- ***We have now patent pending for the utility patent.***
- ***An in-depth search concluded that there are NO other options like SD2 available!***
- ***Our solution is compact, user friendly and cost effective for all users.***

No matter the cause of your voice disorder, SD2 can easily help you to amplify your voice.

sd2 voice amplifier

3 X THE FOCUS

SD2 AND ITS USES

- Business Meetings & Large Groups – Amplify your voice without bulky expensive equipment!
- Medical Caused Voice Loss & Challenges – You can now be heard without feeling like you are shouting!
- Muffled Mask Voice – Be heard in a pandemic world of COVID & beyond!

TODAY'S COVID PROBLEM

Smart Communication Excellence

COVID-19 is a strain of coronavirus that had not been previously identified in humans.

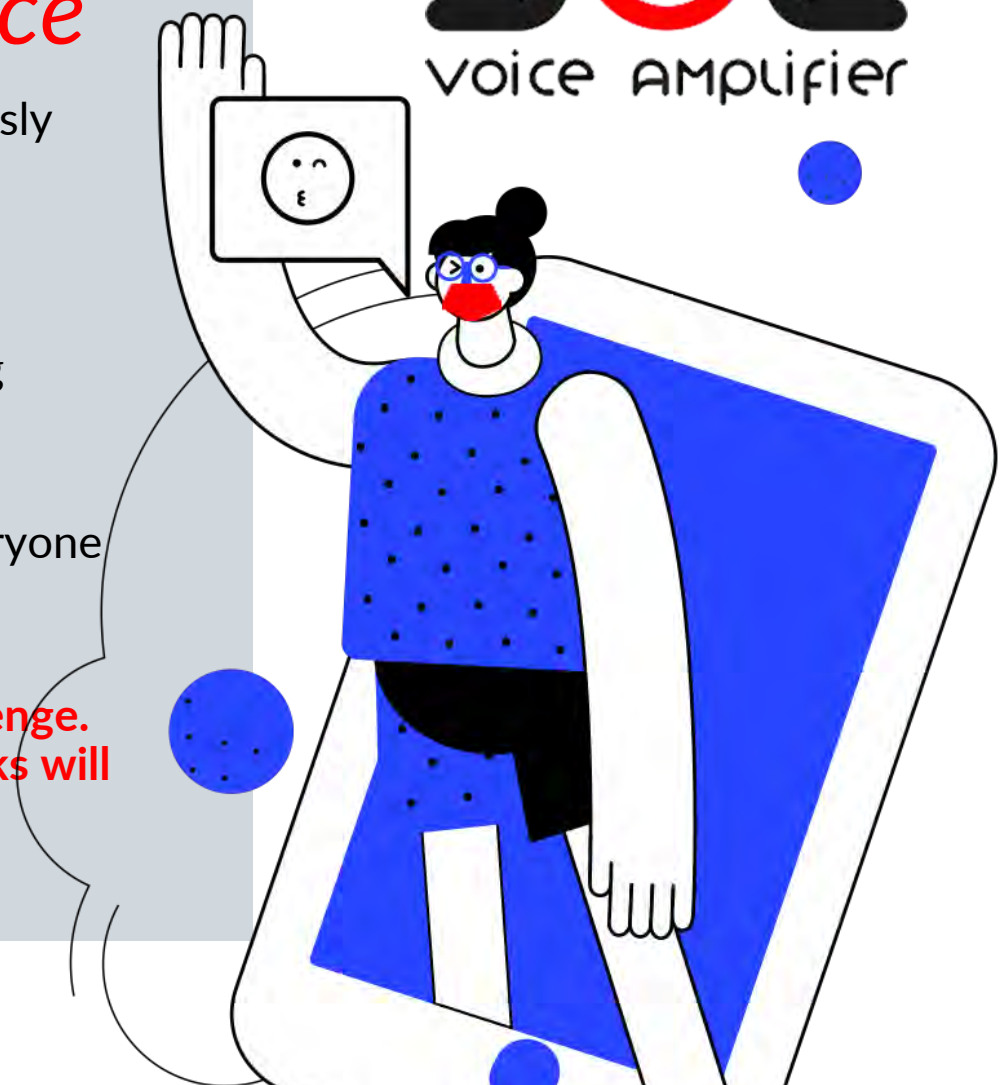
COVID-19 is the cause of a worldwide outbreak of respiratory illness first detected in Wuhan, Hubei province, China.

Since December 2019, cases have been identified in a growing number of countries across the world, with new strains of the COVID-19 virus becoming more prevalent.

With new waves of COVID constantly hitting worldwide, everyone needs to stay safe, by wearing masks and by following social distancing concepts.

In this time of flux, communication excellence is a huge challenge. SD2 makes communication easier in public areas where masks will continue to be required for the foreseeable future.

sd2 voice amplifier



SD2 & STAYING SAFE

The utilization of the SD2 app and a mask ensures that you are not spreading COVID to others. Masks protect others more than they protect you!

Type of mask that we advise:

3 layered protection with high quality filter & 0.4 particulate matter filtered. Min 94% blocks and protect against very small particles.

Elastic ear with adjustable lock for ear loops, pose less pressure to ears and face, avoids being uncomfortable from long periods of wearing.

Each mask you purchase should be packed individually for Hygienic purposes. Make sure that you wash your masks as often as possible and wear a clean mask on each trip outside the home.

Safe Distancing is also an important guideline from the CDC. With no mask outside, remain a safe 6ft distance away from others not in your family.

A mask with 3 Layers of protection effectively protect you against dust, allergen, for haze, splattering, liquids or mist, and odor as well as COVID.

DELTA VARIANT - The Delta variant causes more infections and spreads faster than earlier forms of the virus that causes COVID-19.

In the coming winter months, COVID will be even more infectious due to inside heating and the potential of unclean duct work. Wear your mask inside too!

OMICRON VARIANT - On Tuesday, November 30, 2021, the U.S. government SARS-CoV-2 Interagency Group made the decision to classify the Omicron variant as a Variant of Concern (VOC).

CHALLENGES – BIG EVENTS!

The City of Inglewood regularly has large events at arenas and stadiums

Attendees and Essential Workers should be wearing masks and actively Social Distancing

Loud noises, big crowds and the wearing of masks makes communication incredibly difficult!

SD2 makes sure that your staff and the essential workers are heard about the din!

MEDICAL USES FOR SD2

- **Laryngitis.** This is when your vocal cords swell. It makes the voice sound hoarse. Or you may not be able to speak at all. Acute laryngitis happens suddenly. It is often caused by a virus in the upper respiratory tract. It often lasts just a few weeks. Treatment is to rest the voice and drink plenty of fluids. Chronic laryngitis is when the swelling lasts for a long time. Common causes include a chronic cough, using inhalers for asthma, and GERD (gastroesophageal reflux disease). Treatment of chronic laryngitis depends on the cause.
- **Vocal cord paresis or paralysis.** The vocal cords can be paralyzed or partly paralyzed (paresis). This can be caused by a viral infection that affects your vocal cord nerves, an injury to a nerve during surgery, stroke, or cancer. If one or both of your vocal cords are paralyzed in a nearly closed position, you may have noisy or difficult breathing. If they are paralyzed in an open position, you may have a weak, breathy voice. Some people will get better over time. In other cases, the paralysis is lifelong (permanent). Surgery and voice therapy may help improve the voice.
- **Spasmodic dysphonia.** This is a nerve problem that causes the vocal cords to spasm. It can make the voice sound tight, quivery, jerky, hoarse, or groaning. At times, the voice may sound normal. Other times, the person may not be able to speak. Treatment may include speech therapy and shots (injections) of botulinum toxin to the vocal cords.
- **Medical Related Disorders.** There are a variety of reasons why a patient may have reduced voice functionality from cancer to just plain overuse.
